## Senior Alpine Candidate – Skills Sign Off

The Senior candidate is responsible for his or her own training and abiding by any guidelines established by the region Senior program administrator. Tracking skill development during training is critical for success in the Alpine program. Senior Alpine Skill sign-off can be utilized to track training progress and must be completed in order to participate in the Senior Alpine evaluation. The Alpine skiing/boarding skills must be signed off by a current Senior Ski/Ride Evaluator. The Alpine toboggan skills sign-off must be signed off by a current Senior Toboggan Evaluator. Completed skills sign-off sheets are to be presented to the region administration in accordance to region specific protocol.

Loaded Toboggan Lead with Tail Rope Operator:

Candidate Name: \_\_\_\_\_

Performance Objective	Instructor Name	Instructor Signature	Date
Selects a route that helps the tail maintain stability and prevents toboggan from slipping sideways			
The ride is smooth and at a continuous pace utilizing turns, transitions and traverses at a constant pace			
Execute traverse with minimal side slip thru edge control			
Transitions use simultaneous edge change most of the time			
Provides primary braking to aid in maintaining pace and control			
Correctly uses chain brake as necessary without compromising tail operator stability			
Communicates speed and directional changes to tail operator			
Capable of executing an emergency stop if requested			
Actively monitors slope traffic conditions, uphill and downhill			

Loaded Toboggan-Rear Operator:

Candidate Name: \_\_\_\_\_

Performance Objective	Instructor Name	Signature	Date
Operator holds rope using both hands in front of body, at waist to mid thigh level			
The controlling hand is the downhill hand and is closest to the toboggan			
If the tail rope has a loop at the end, only one hand is permitted in the tail loop at any one time			
The tail rope is maintained in the fall line with a maximum of one coil recommended			
Performs transitions that manage the rope functional tension with only minimal slack			
Transitions use simultaneous edge change most of the time			
Traverses in both directions with minimal toboggan slippage			
Provides secondary braking as needed			
Coordinates and communicates with the toboggan lead			
Actively monitors patient and slope traffic, uphill and downhill			
Ensure the "reserve braking rule" is in place at all time
